UNNA Boot Wear & Care

An UNNA boot is a medicated gauze wrap for leg ulcers and rashes.

For the best results:

- 1. Once the UNNA boot is applied, stay off of your feet as much as possible and elevate your legs when sitting.
- 2. Do not get the UNNA boot wet.
- Shower or tub bath if you are able to keep boot dry. You may use a plastic bag over the boot.

Please inform us by calling 205.871.7332 if you experience any of the following:

- Severe itching and rash above or below the UNNA boot
- Coldness, numbness or tingling in the legs
- Change in color or inability to move toes
- · Pain and cramping in the leg
- · Foul-smelling drainage
